- Pays on company Organizational Volume on product sales
- Pool Value = 5% of monthly product sales commissions
- Qualified at rank distributors share pools

Platinum	POOL 3	5%
Gold	POOL 2	5%
Silver	POOL 1	5%

Definitions

Active Status: Distributors are active by qualifying with \$9.95 personal volume (PV). Distributors may also qualify by having five active members or \$50 in retail volume on their level one during the qualifying period.

Commissionable volume CV: used to calculate commissions.

Qualifying Volume QV: Used to qualify rank.

Retail Customer: Purchase at retail pricing.

Wholesale Member: Purchases \$9.95 monthly membership fee, has access to membership perks and wholesale pricing.

Distributor: Purchases a distributor/technology fee of \$19.95 annually. Participates in rewards plan. May sign up members and retail customers and distributors.

Paid Rank: The rank that a member qualifies for the current month.

Enroller: The individual who personally enrolls a distributor or customer into the company.

Enroller tree: The structure of the company based on each distributor's personally enrolled distributors and customers.

Organization Volume OV: The total qualifying volume for the period of all distributors, retail customers and members.

Personal Volume PV: Volume from your personal membership, retail customers or wholesale members. Retail customer or wholesale member volume counts towards the distributor that enrolled them.

Binary Sponsor: The individual that is placed in the binary tree. The sponsor and enroller can be different distributors.

Binary Sponsor Tree: This is a two leg placement tree for monthly membership fees. Distributors and members can be placed in either leg.

Spillover: In the binary tree, only two positions occur in each node. If the two directly under each node are full, then the distributor places them farther down the binary tree. This is called spillover. Spillover is not guaranteed.

Pay Leg: The binary adds up volume (50% fast start) for each of the two legs. Member volume goes into the pay-leg. This is also called weakside volume.

Strong Leg: The binary adds up volume, the leg with more volume is called the strong leg.

Flushing: After the binary pays out on the pay leg weekly, corresponding volume is flushed from both legs (see Primary Bonus slide).
